Dear Dr Hill

DAVID BLACK 01.05.37  
1 ST. TEILING, LANARK, ML11 7HY

I reviewed this gentleman in the clinic today. I am sorry that you had not received my letter last week but no doubt it would have got to you now. Unfortunately I am still awaiting his immunology and iron studies to exclude other possible causes of cirrhosis. I have had a word from our Pharmacy Department to tell me that ideally Interferon should be stored in the fridge but it does have a limited shelf life at room temperature. Mr Black himself is not keen to proceed with Interferon therapy for the moment and I have explained to him that it is not essential that he does so. I have just arranged to see him back in four months time when we can check his liver function tests and have a further chat.

Yours sincerely

*D K George*
