Dear Dr Davda

EILEEN O'HARA (9.10.30)
56 MENZIES ROAD GLASGOW G21 3LY

Diagnosis: Mixed mitral valve disease.

Treatment: Mitral valvotomy 31 years ago. MVR porcine bioprosthesis -
7.6.85. Redo mitral valve replacement with St Jude bileaflet
mechanical valve size 29 - 18.10.91.

This 63 year old lady was well following her operation and had no complaints. On examination controlled atrial fibrillation, BP 130/70, valve sounds satisfactory, chest clear, bilateral oedema feet, but has bilateral varicose veins.

She is on Digoxin, Bumide and Warfarin. I have asked her to continue with the same treatment and made arrangements for her to be seen again in a year's time.

Yours sincerely

S K Naik
Senior Lecturer in Cardiac Surgery
