Dear Dr Davda

Fileen O'Hara (9.10.30)
5 Menzies Road, Glasgow G21 3LY

I reviewed this lady in Mr Dimitri's Clinic today. You will remember he has undergone replacement of a failed mitral Wessex bioprosthesis with a St Jude bileaflet mechanical valve in October this year. Her recovery from this procedure was remarkably quick and smooth and she remained in controlled atrial fibrillation post operatively. After discharge from the hospital she has been doing fairly well with reasonable exercise tolerance and is reporting no complaints.

On examination she was not short of breath and she was in controlled atrial fibrillation. Examination of the chest was normal with a good functioning prosthetic valve in mitral position. All the wounds were nicely healed and there were no signs of peripheral oedema. I have advised her to stay on her present therapy, change her Frusemide and Slow K to a combined preparation of Diumide and I have arranged for her review in this clinic in one year.

Yours sincerely
