OPERATION CHART

6

SURNAME	FORENAME	UNIT NUMBER
O'HARA	EILEEN	093961
AGE:	WARD: 5 HDU	

DATE OF OPERATION 7 APRIL 2003

SURGEON'S NOTES

OPERATION PERFORMED

SURGEON MR K ROBERTSON
DR C HOH

OPERATION ERCP (failed)

PATHOLOGY Severe acute pancreatitis, metal heart valve on Warfarin

DRUGS Midazolam 4 mg, Pethidine 25 mg, Buscopan 40 mg, Cefuroxime 1 gm and Gentamicin 80 mg

PROCEDURE The duodenal mucosa was friable. The ampulla was initially difficult to identify. Once this was achieved it was a little hard - nubbin of an ampulla that would not accept a cannula despite repeated efforts. A cautious needle knife approach was undertaken with three separate efforts made without any significant bleeding. Following this it was elected that it would be safer to desist today, re-heparinize and return in two days.
