Dear Dr. Davda

EILEEN O'HARA, d.o.b. 09.10.30, Unit No. 093961
66 Menzies Road, Glasgow G21 3LY

I reviewed this patient in Dr. Dunn's Clinic today.

what day?

From a cardiac standpoint her symptoms remain stable. In particular, she remains mildly dyspnoeic on exertion. However, this does not limit her. She has no ankle swelling and does not complain of any chest pain.

She continue on Diumide K, Digoxin and Gliclazide.

As you are aware, she remains under investigation of hepatosplenomegaly. Dr. Forrest has reviewed her notes. I note he is arranging a liver biopsy to further assess the evidence of ongoing hepatitis.

On examination she looked well if a little thin. She had a pulse of 72 and a blood pressure of 170/70. Her JVP was elevated 2 cm. However, there was no significant peripheral oedema. Cardiovascular examination revealed a RV heave, displaced at the apex, which was very much left ventricular in character. Heart sounds were I + II + a systolic murmur. Abdominal examination revealed hepatosplenomegaly as before.

2.

Due to the stability of her cardiac symptoms I have not made any change to her medication. We will await with interest the result of her liver biopsy.

Yours sincerely
