Dear Dr Davda,

EILEEN O'HARA, DOB: 9.10.30 UNIT NO: 93961  
58 MENZIES ROAD, GLASGOW, G21 3LY

This patient's only complaint when seen for review was that she had a rather sore back.

I took the opportunity to re-examine her abdomen, and confirmed that she really does have very marked splenomegaly and mild hepatomegaly. ~~As this has not been previously noted, then it would appear to need~~ further investigation. A biochemical screen performed at her last visit was normal, but I have done a full blood count and retics today, and she has an appointment for an abdominal ultrasound in two weeks' time. I have, therefore, arranged to see her at the Clinic in six weeks' time.

As far as her diabetes is concerned, this seems to be coming under reasonable control on diet alone.

Yours sincerely,

Enul

E H McLAREN  
CONSULTANT PHYSICIAN
