GLASGOW G21 1TR

558-0101

Dear Doctor,

I would be obliged if you could see this 58 years old lady who has recently been found to be suffering from diabetes. However, she is well controlled on diet only. she was referred to the optician for routine eye check and the optician has found some evidence of diabetic retinopathy. However, I am unable to see any major changes.

Past medical history - She had mitral valve replacement in 1985 and is on controlled atrial fibrillation.
She had a hysterectomy in the past

Drug history - warfarin and Digoxin

Thank you for seeing her.

Yours sincerely,

(A. DAVDA)
