Dear Dr Donnelly

This patient was admitted electively on 5.6.85 for surgical correction of mitral valve disease. Operation was performed on 7 June and the stenotic regurgitant mitral valve was excised and replaced with a 33 mm Wessex medical porcine bioprosthesis. Her operative procedure and recovery was entirely uncomplicated and she was discharged on 14.6.85, her drugs at that time consisting of Warfarin 3 mg per day, Digoxin 0.25 mg per day, Lasix 80 mg per day and Slow-K 600 mg t.d.s. An arrangement has been made to review her in Out-patients' in approximately six weeks time.

Yours sincerely

I J Reece
Senior Lecturer in Cardiac Surgery
