Dear Dr Duncan

Victor Tamburrini DoB 27/04/57
284E London Road Glasgow G40 1PT

Following his clinic visit, this gentleman's U's and E's were normal, with albumin 24, bilirubin 56 and ALT 137. I note his alpha-feto protein was now raised at 366. This is of concern although I note earlier MRI in November was reassuring. His rising alpha-feto protein is very suggestive of hepatoma and I will bring him back early to clinic and discuss further imaging.

Yours Sincerely

A J Stanley
Consultant Gastroenterologist
