CT SCAN OF THE ABDOMEN

Contrast enhanced three phase scan performed. Underlying liver cirrhosis is noted. More importantly there is no underlying hepatic mass. Gastro-oesophageal varices and varices along the lesser curve of the stomach are also noted. No splenomegaly.

Impression: Underlying liver cirrhosis with no underlying hepatoma but with overt portal hypotension.

ABDOMINAL ULTRASOUND

Contrast enhanced ultrasound scan performed for the liver. Similarly underlying liver cirrhosis is noted but there is no underlying hepatoma.
