EDINBURGH

Dear Robert

EFFICACY OF HEAT TREATMENT OF FVIII CONCENTRATE

Many thanks for the manuscript. I'm returning with a few comments - if you can't read them please give a ring!

I think in its present form I will be happy for this to go as a letter to the Lancet. I'm sure they will accept it and this guarantees fast publication and very wide exposure.

I have sent a copy to the Director of the PFC, Dr Bob Perry, but as you know, he is responsible for all the regulatory aspects of these products and it is therefore very important that he has an opportunity to comment before this is submitted. I've asked him to send his comments directly to yourself and I'm sure that he won't delay things.

Many thanks for a very clear manuscript.

With kinds regards.

Yours sincerely

P.S. I don't really think that the table is needed but you do need to show in the text the number of bottles of each batch of concentrate which were received by the patients who could be evaluated (mean and range would do).
