Dear Prof. Bloom

CALCIUM STABILISATION-OF VIII:C

Here is a second draft of our manuscript. I have made a number of changes; the main ones being:

1. VIII:C results are now all calculated against a concentrate standard (excluding plasma samples). This was done using a "conversion factor" derived from detailed data that we have on the comparison of plasma vs concentrate standards throughout the factor VIII process.

2. Table VI has been changed to cover only the material used clinically.

3. The length of the text has been reduced by about 20%.

Please let me know if you have any further comments or suggestions.

Best wishes.

Yours sincerely

PETER R FOSTER
